Plant Safety

The Ontario Poison Centre receives many calls about children who have touched or eaten a plant.

If your child eats or touches a plant, berry, seed, bulb or wild mushroom that you think may be poisonous, call us immediately.

When you call the poison centre, be prepared to give the following information:

- Any symptoms of illness your child displays.
- Name of plant (if you know it). The Specialists at the Centre are Specialists in Poison Information, they are not plant specialists. They cannot identify plants over the phone.
- How much and what parts were eaten?
- When/how long ago did this happen?
- The child’s age.

The Poison Specialist will tell you what to do and what symptoms to watch for. Children can react differently to the same plant.

Helpful hints to prevent a plant poisoning:

- To be safe, keep all plants, berries, seeds, and bulbs out of reach of young children.
- Of course this is not always possible, especially outdoors, so teach your child to stay away from plants and not to eat any non-food items!
- Make sure you and your child’s caregivers know the names of all plants and trees inside and outside your home, just in case.
- It’s a good idea to leave the tags on all items you bring home from a plant nursery. If you don’t know the names, an expert from a plant nursery may be able to help you identify the plant and give you a tag to place near your plant.
- Be careful:
  - Do not assume that a plant is safe for people just because birds or wildlife eat it.
  - Jewelry, crafts and maracas, especially those purchased outside of Canada, may contain poisonous seeds.
  - Do not suck nectar from flowers or make tea from flowers or leaves.
  - Cactus plants can cause skin to be irritated and should be kept away from children.

Poisonous Plants

The following plants are known to be poisonous to humans.

- Some of these plants will not cause serious poisoning unless a large amount is eaten.
- Seeds or pits from apples, apricots, cherries, nectarines and peaches are poisonous, but only if eaten in large amounts. Accidentally swallowing a few seeds will not cause illness.
- Remember, a young child may choke on any plant.
- This is not a complete list of all poisonous plants.

If any of these poisonous plants are eaten, call the Ontario Poison Centre right away:

- Daisy (Chrysanthemum)
- Delphinium
- Dieffenbachia (Dumb Cane)
- Dumb Cane
- Elephant's Ear
- English Ivy
- Eucalyptus
- Euonymus
- Foxglove
- Gladiola
- Holly
- Horse Chestnut
- Hyacinth
- Hydrangea
- Iris
- Jack-in-the-Pulpit
- Jequirity Bean
- Jerusalem Cherry
- Jimson Weed
- Larkspur
- Lily-of-the-Valley
- Lobelia
- Lupine
- Marijuana
- Milkweed
- Mistletoe
- Monkshood
- Morning Glory
- Mother-in-law Plant
- Mother-in-law's Tongue Plant
- Narcissus
- Nightshade
- Oleander
- Peony
- Periwinkle (Vinca)
- Philodendron
- Poison Ivy
- Poison Oak
- Pokeweed
- Potato (all green parts)
- Pothos
- Rhododendron
- Rhusbarb Leaves
- Rosary Bean
- Snake Berry
- Snow on the Mountain
- Star of Bethlehem
- St. John’s Wort
- Tobacco
- Tomato (plant & unripe fruit)
- Virginia Creeper
- Water Hemlock
- Wisteria
- Yew
Non Poisonous Plants

The plants listed on the right are considered non poisonous to humans.

- A person is not likely to get ill from these plants, but certain people may have an unusual reaction.
- Remember that a young child may choke on any plant.
- Although these plants are not poisonous to humans, some of these plants may be harmful to pets. Call your Veterinarian for more information.
- This is not a complete list of all non poisonous plants.

First Aid

What to do if a child EATS a poisonous plant:

If a child puts a plant in his or her mouth, do not taste the plant yourself to check if it is poisonous.

If a child is choking, unconscious, or having trouble breathing or swallowing, you should:

- Call 911 right away.

If the child appears well, you should:

- Look for pieces of the plant in their mouth.
- Remove any pieces of the plant that you can see.
- Give small sips of water.
- Do not try to make the child throw up.
- Call the Ontario Poison Centre.

What to do if a child TOUCHES a poisonous plant:

Some plants may cause skin irritation, itching, a rash or blisters.

- Wash the skin immediately with lots of soap and lukewarm water.
- Call the Ontario Poison Centre.

Mushroom Safety

Poisonous and non poisonous mushrooms grow side by side. Only a mushroom expert, called a mycologist, can tell the difference. It is dangerous to eat any mushroom that you have found outdoors. Cooking outdoor mushrooms does NOT make them safe to eat.

Please note:

- Eating even small parts of some mushrooms can cause sickness and death.
- After eating a poisonous mushroom, a person may not become ill for many hours.
- Do not wait until the person feels sick to call the Ontario Poison Centre.

Helpful hints to prevent mushroom poisoning:

- Remove and throw away all mushrooms growing near your home.
- Check your lawn for mushrooms before children go outdoors to play, especially after a rainfall.
